How to click on Image links in Selenium Webdriver

Locate Image link on web page

- Image links are the links in web pages represented by an image which when clicked **navigates to a different window or page**
- we **cannot use the By.linkText() and By.partialLinkText()** methods because image links basically have **no link texts** at all
- In this case, we can use **By.cssSelector** or **By.xpath** to locate the image link.
