

Session-8 How to find broken links/dead links on a web page

Monday, July 11, 2022 5:19 PM

WHAT ARE BROKEN LINKS

- Broken links are links or URLs that are **not reachable**. They may be **down** or not functioning due to some error
- The user entered an **improper/misspell URL**
- The **destination web page is down, moved, or no longer exists.**
- With **activated firewall settings**, also the browser cannot access the destination web page at times.
